

Steven Vale M.D.

Ophthalmologist

Refractive Surgeon

5-Time Winner of the Patients' Choice Award

Dr. Vale is a native of Northeast PA. He is board certified in both Internal Medicine and Ophthalmology.

Dr. Vale is a graduate of Franklin and Marshall College in Lancaster, Pennsylvania.

He received his medical degree from The Medical College of Pennsylvania (now Drexel University School of Medicine).

He served a medical internship at Crozer-Chester Medical Center in Chester, Pennsylvania.

He completed a residency in internal medicine at Pennsylvania Hospital in Philadelphia.

He completed a residency in ophthalmology at Henry Ford Health Sciences Center.

He completed a fellowship in cornea, external disease and refractive surgery at Kresge Eye Institute, Wayne State University in Detroit, Michigan.

Dr. Vale is Pennsylvania's most experienced eye surgeon in the field of laser vision correction of refractive errors. He has performed more than 27,000 laser vision correction procedures since 1994.

Epi-LASIK

No Incision Laser Vision Correction
Faster Recovery, Less Discomfort

Recommended for Active People
And Those Who Prefer
Laser Vision Correction
Without a Flap

Epi-LASIK

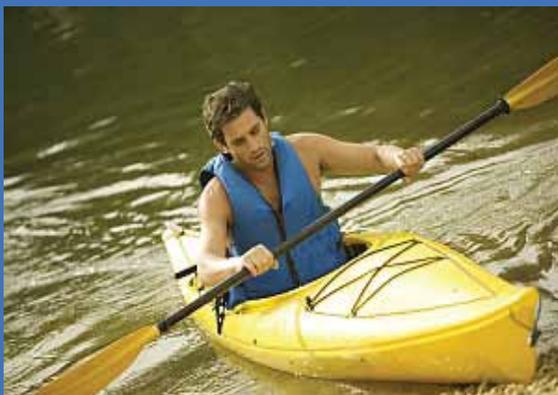

For comfort and a quick recovery without a “flap”!

Epi-LASIK takes Laser Vision Correction to the Next Level!

Epi-LASIK is the very latest development in laser vision technology. Using a very precise instrument called the epikeratome, Dr. Vale will gently separate the thin outer layer of the cornea to leave a smooth surface which is then treated using the excimer laser.

For those who are not candidates for LASIK, this procedure offers the fastest and most comfortable recovery. Patients may drive and return to their normal routine one or two days earlier than with the PRK procedure.

The Benefits of Epi-LASIK:

During this procedure the epithelium, a thin surface layer protecting the cornea, is peeled away using the epikeratome, so the laser can then be used to reshape the cornea. There is no incision and the epithelial layer grows back within days following surgery. There is never a chance of dislodging a “flap” created by an incision, as there is with LASIK.

This procedure is ideal for those who lead active lifestyles, such as athletes, or those with hazardous jobs, such as law enforcement officers, fire fighters, foresters and military personnel.

Epi-LASIK is also an option for those with thin or irregularly shaped corneas who cannot have LASIK.

Epi-LASIK is gentle on corneal nerves and less likely to cause or worsen dry eye syndrome.

Ask the doctor if Epi-LASIK is the best choice for you!
